## Volume 21

actin, regulated, muscle contraction, actin-myosin interactions, heavy meromyosin, myosin subfragment 1, crosslinking, cooperativity, 85
actin-myosin interactions, muscle contraction, actin, regulated, heavy meromyosin, myosin subfragment 1, crosslinking, cooperativity, 85
aging, carcinogenesis, instability, intrinsic, protein turnover, short-lived proteins, 135
algorithm, evolutionary learning, automata, hierarchical control, stochastic network, graph-search, 115
anaerobic chytrids, rumen anaerobic fungi, Neocallimasticaceae, cell wall digestion, 371
anaerobic fungi, *Neocallimastix*, rumen fungi, survival of rumen fungi, life cycle of rumen fungi, 357
anaerobic fungi, sheep rumen, cattle rumen, carbohydrate utilization, fermentation endproducts, 377
anti-tubulin antibody, tubulin evolution, protists, phylogeny, 255
archaebacteria, rRNA sequences, paralogy, progenote, sequence homogenization in multicopy gene families, microsporidia, origin of organelles, 177
architecture of brain, non-linear dynamics, pattern recognition, learning, neurobotics, molecular computation, 125
associative memories, novelty detectors, neural novelty detectors, cortical novelty detection, 99
ATP build-up, oscillary glycolysis, coupled reactors, residence times, recycle ratio, 95
automata, evolutionary learning, hierarchical control, stochastic network, graph-search, algorithm, 115

basal body ontogeny, flagellar roots, protist flagellar bases, 277
biomolecular computer, cyclic enzyme system, computer simulations, switching circuit, rectifier circuit, 1

carbohydrate utilization, anaerobic fungi, sheep rumen, cattle rumen, fermentation endproducts, 377
carbon cycling stability, closed ecosystem, material closure, persistence, life support systems, 165
carcinogenesis, aging, instability, intrinsic, protein turnover, short-lived proteins, 135
cattle rumen, anaerobic fungi, sheep rumen, carbohydrate utilization, fermentation endproducts, 377
cell wall digestion, rumen anaerobic fungi, anaerobic chytrids, Neocallimasticaceae, 371
*Chilomonas paramecium*, cryptoprotists, cytoskeleton, mitosis, phylogeny, 293
*Chlamydomonas*, chlorophyta, ribosomal RNA genes, restriction endonucleases, phylogenetic relationships, dideoxynucleotide sequencing, 223
chlorophyta, *Chlamydomonas*, ribosomal RNA genes, restriction endonucleases, phylogenetic relationships, dideoxynucleotide sequencing, 223
chloroplast, *Glenodinium (Peridinium) foliaceum*, *Peridinium balticum*, DNA, dinoflagellate nuclei, plastid evolution, endosymbiosis, 151
chrysophyte, diatom, dinoflagellate, meiosis, *Peridinium balticum*, sexuality, symbiosis, 69
chytridiomycetes, rumen, metabolism, 365
Chytridiomycetes, rumen fungi, systematics, Spizellomycetaceae, Neocallimasticaceae, 351
Chytridiomycetes, rumen fungi, zoospore structure, 403
ciliates, cortex, terminology, kinetids, 299
ciliates, dinoflagellates, phylogenetic relationships of ciliates to other high-level protist groups, 323
ciliates, rRNA, sequencing, phylogeny, reverse transcriptase, 249
ciliates, systematics, ultrastructure, kinetids, 317
cladistics, 5S rRNA, 16S rRNA, plastids, mitochondria, endosymbiotic theory, 209
closed ecosystem, material closure, carbon cycling stability, persistence, life support systems, 165
community level evaluation, loop analysis, stability, simulation of communities, 25
computer simulations, cyclic enzyme system, switching circuit, biomolecular computer, rectifier circuit, 1
cooperativity, muscle contraction, actin, regulated, actin-myosin interactions, heavy meromyosin, myosin subfragment 1, crosslinking, 85
cortex, ciliates, terminology, kinetids, 299
cortical novelty detection, novelty detectors, neural novelty detectors, associative memories, 99
coupled reactors, oscillary glycolysis, residence times, recycle ratio, ATP build-up, 95
crosslinking, muscle contraction, actin, regulated, actin-myosin interactions, heavy meromyosin, myosin subfragment 1, cooperativity, 85
cryptoprotists, *Chilomonas paramecium*, cytoskeleton, mitosis, phylogeny, 293

culture media, gut fungi, taxonomy, 417
cuticle, monocentric, polycentric, electron microscopy, lignocellulose, 385
cyclic enzyme system, computer simulations, switching circuit, biomolecular computer, rectifier circuit, 1
cytoskeleton, *Chilomonas paramecium*, cryptoprotists, mitosis, phylogeny, 293

diatom, chrysophyte, dinoflagellate, meiosis, *Peridinium balticum*, sexuality, symbiosis, 69
dideoxynucleotide sequencing, chlorophyta, *Chlamydomonas*, ribosomal RNA genes, restriction endonucleases, phylogenetic relationships, 223
dimorphic cell cycles, *Rhodomicrobium vannielii*, 13
dinoflagellate, chrysophyte, diatom, meiosis, *Peridinium balticum*, sexuality, symbiosis, 69
dinoflagellates, ciliates, phylogenetic relationships of ciliates to other high-level protist groups, 323
dinoflagellate nuclei, *Glenodinium (Peridinium) foliaceum*, *Peridinium balticum*, DNA, chloroplast, plastid evolution, endosymbiosis, 151
diploid, microsporidia, mitosis, gametogenesis, meiosis, haploid, 333
DNA, *Glenodinium (Peridinium) foliaceum*, *Peridinium balticum*, chloroplast, dinoflagellate nuclei, plastid evolution, endosymbiosis, 151
dynamics of morphogenesis, hypotrich ciliate evolution, infraciliature ultrastructure, 309

electron microscopy, monocentric, polycentric, lignocellulose, cuticle, 385
endosymbiosis, *Glenodinium (Peridinium) foliaceum*, *Peridinium balticum*, DNA, chloroplast, dinoflagellate nuclei, plastid evolution, 151
endosymbiotic theory, cladistics, 5S rRNA, 16S rRNA, plastids, mitochondria, 209
euglenoids, feeding apparatus, flagellar apparatus, kinetoplastids, 282
evolution, protistan taxonomy, protistan nomenclature, systematics, 197
evolution, restriction code, recognition, language expansion model, 33
evolution, ribosomal RNA, sequences, protists, 203
evolutionary learning, automata, hierarchical control, stochastic network, graph-search, algorithm, 115

feeding apparatus, flagellar apparatus, euglenoids, kinetoplastids, 282
fermentation endproducts, anaerobic fungi, sheep rumen, cattle rumen, carbohydrate utilization, 377
flagellar apparatus, feeding apparatus, euglenoids, kinetoplastids, 282
flagellar roots, basal body ontogeny, protist flagellar bases, 277

gametogenesis, microsporidia, mitosis, meiosis, haploid, diploid, 333
geographic spread, *Naegleria fowleri*, *Naegleria gruberi*, restriction enzyme analysis, repeated DNA, virus-like particle, 269
*Glenodinium (Peridinium) foliaceum*, *Peridinium balticum*, DNA, chloroplast, dinoflagellate nuclei, plastid evolution, endosymbiosis, 151
graph-search, evolutionary learning, automata, hierarchical control, stochastic network, algorithm, 115
gut fungi, culture media, taxonomy, 417

haploid, microsporidia, mitosis, gametogenesis, meiosis, diploid, 333
heavy meromyosin, muscle contraction, actin, regulated, actin-myosin interactions, myosin subfragment 1, crosslinking, cooperativity, 85
hierarchical control, evolutionary learning, automata, stochastic network, graph-search, algorithm, 115
histones, *Peridinium balticum*, 231
hypotrich ciliate evolution, dynamics of morphogenesis, infraciliature ultrastructure, 309

infraciliature ultrastructure, hypotrich ciliate evolution, dynamics of morphogenesis, 309
instability, aging, carcinogenesis, intrinsic, protein turnover, short-lived proteins, 135
intrinsic, aging, carcinogenesis, instability, protein turnover, short-lived proteins, 135

kinetids, ciliates, cortex, terminology, 299
kinetids, ciliates, systematics, ultrastructure, 317
kinetoplastids, feeding apparatus, flagellar apparatus, euglenoids, 282

language expansion model, restriction code, evolution, recognition, 33
learning, architecture of brain, non-linear dynamics, pattern recognition, neurobotics, molecular computation, 125
life cycle of rumen fungi, *Neocallimastix*, rumen fungi, anaerobic fungi, survival of rumen fungi, 357
life support systems, closed ecosystem, material closure, carbon cycling stability, persistence, 165
lignocellulose, monocentric, polycentric, electron microscopy, cuticle, 385
loop analysis, community level evaluation, stability, simulation of communities, 25

macroevolution, protists, phylogeny, 189
material closure, closed ecosystem, carbon cycling stability, persistence, life support systems, 165
meiosis, chrysophyte, diatom, dinoflagellate, *Peridinium balticum*, sexuality, symbiosis, 69
meiosis, microsporidia, mitosis, gametogenesis, haploid, diploid, 333
metabolism, rumen, chytridiomycetes, 365
microsporidia, mitosis, gametogenesis, meiosis, haploid, diploid, 333

microsporidia, rRNA sequences, paralogy, progenote, sequence homogenization in multicopy gene families, archaebacteria, origin of organelles, 177
mitochondria, cladistics, 5S rRNA, 16S rRNA, plastids, endosymbiotic theory, 209
mitochondrial evolution, mitoribosomes, mitochondrial protein synthesis initiation, mitochondrial tRNA, 51
mitochondrial protein synthesis initiation, mitochondrial evolution, mitoribosomes, mitochondrial tRNA, 51
mitochondrial tRNA, mitochondrial evolution, mitoribosomes, mitochondrial protein synthesis initiation, 51
mitoribosomes, mitochondrial evolution, mitochondrial protein synthesis initiation, mitochondrial tRNA, 51
mitosis, *Chilomonas paramecium*, cryptoprotists, cytoskeleton, phylogeny, 293
mitosis, microsporidia, gametogenesis, meiosis, haploid, diploid, 333
molecular computation, architecture of brain, non-linear dynamics, pattern recognition, learning, neurobotics, 125
molecular evolution, restriction site analysis, plastid DNA, restriction polymorphism, *Vaucheria sessilis*, 239
molecular phylogeny, 24–26S rRNA secondary structure, protists, 215
monocentric, polycentric, electron microscopy, lignocellulose, cuticle, 385
muscle contraction, actin, regulated, actin-myosin interactions, heavy meromyosin, myosin subfragment 1, crosslinking, cooperativity, 85
myosin subfragment 1, muscle contraction, actin, regulated, actin-myosin interactions, heavy meromyosin, crosslinking, cooperativity, 85

*Naegleria fowleri*, *Naegleria gruberi*, restriction enzyme analysis, repeated DNA, virus-like particle, geographic spread, 269
*Naegleria gruberi*, *Naegleria fowleri*, restriction enzyme analysis, repeated DNA, virus-like particle, geographic spread, 269
Neocallimasticaceae, rumen anaerobic fungi, anaerobic chytrids, cell wall digestion, 371
Neocallimasticaceae, rumen fungi, systematics, Spizellomycetaceae, Chytridiomycetes, 351
*Neocallimastix*, rumen anaerobic fungi, zoospore ultrastructure, polyflagellate zoospore, 393
*Neocallimastix*, rumen fungi, anaerobic fungi, survival of rumen fungi, life cycle of rumen fungi, 357
neural novelty detectors, novelty detectors, cortical novelty detection, associative memories, 99
neurobotics, architecture of brain, non-linear dynamics, pattern recognition, learning, molecular computation, 125
non-linear dynamics, architecture of brain, pattern recognition, learning, neurobotics, molecular computation, 125
novelty detectors, neural novelty detectors, cortical novelty detection, associative memories, 99

origin of organelles, rRNA sequences, paralogy, progenote, sequence homogenization in multicopy gene families, archaebacteria, microsporidia, 177
oscillary glycolysis, coupled reactors, residence times, recycle ratio, ATP build-up, 95

paralogy, rRNA sequences, progenote, sequence homogenization in multicopy gene families, archaebacteria, microsporidia, origin of organelles, 177
pattern recognition, architecture of brain, non-linear dynamics, learning, neurobotics, molecular computation, 125
*Peridinium balticum*, chrysophyte, diatom, dinoflagellate, meiosis, sexuality, symbiosis, 69
*Peridinium balticum*, *Glenodinium (Peridinium) foliaceum*, DNA, chloroplast, dinoflagellate nuclei, plastid evolution, endosymbiosis, 151
*Peridinium balticum*, histones, 231
persistence, closed ecosystem, material closure, carbon cycling stability, life support systems, 165
phylogenetic relationships, chlorophyta, *Chlamydomonas*, ribosomal RNA genes, restriction endonucleases, dideoxynucleotide sequencing, 223
phylogenetic relationships, thraustochytrids, 341
phylogenetic relationships of ciliates to other high-level protist groups, ciliates, dinoflagellates, 323
phylogeny, *Chilomonas paramecium*, cryptoprotists, cytoskeleton, mitosis, 293
phylogeny, protists, macroevolution, 189
phylogeny, rRNA, sequencing, ciliates, reverse transcriptase, 249
phylogeny, tubulin evolution, protists, anti-tubulin antibody, 255
plastids, cladistics, 5S rRNA, 16S rRNA, mitochondria, endosymbiotic theory, 209
plastid DNA, restriction site analysis, molecular evolution, restriction polymorphism, *Vaucheria sessilis*, 239
plastid evolution, *Glenodinium (Peridinium) foliaceum*, *Peridinium balticum*, DNA, chloroplast, dinoflagellate nuclei, endosymbiosis, 151
polycentric, monocentric, electron microscopy, lignocellulose, cuticle, 385
polyflagellate zoospore, rumen anaerobic fungi, zoospore ultrastructure, *Neocallimastix*, 393
progenote, rRNA sequences, paralogy, sequence homogenization in multicopy gene families, archaebacteria, microsporidia, origin of organelles, 177
protein turnover, aging, carcinogenesis, instability, intrinsic, short-lived proteins, 135
protistan nomenclature, protistan taxonomy, systematics, evolution, 197
protistan taxonomy, protistan nomenclature, systematics, evolution, 197

protists, 24–26S rRNA secondary structure, molecular phylogeny, 215
protists, phylogeny, macroevolution, 189
protists, ribosomal RNA, sequences, evolution, 203
protists, tubulin evolution, phylogeny, anti-tubulin antibody, 255
protist flagellar bases, flagellar roots, basal body ontogeny, 277

recognition, restriction code, evolution, language expansion model, 33
rectifier circuit, cyclic enzyme system, computer simulations, switching circuit, biomolecular computer, 1
recycle ratio, oscillary glycolysis, coupled reactors, residence times, ATP build-up, 95
repeated DNA, *Naegleria fowleri*, *Naegleria gruberi*, restriction enzyme analysis, virus-like particle, geographic spread, 269
residence times, oscillary glycolysis, coupled reactors, recycle ratio, ATP build-up, 95
restriction code, evolution, recognition, language expansion model, 33
restriction endonucleases, chlorophyta, *Chlamydomonas*, ribosomal RNA genes, phylogenetic relationships, dideoxynucleotide sequencing, 223
restriction enzyme analysis, *Naegleria fowleri*, *Naegleria gruberi*, repeated DNA, virus-like particle, geographic spread, 269
restriction polymorphism, restriction site analysis, plastid DNA, molecular evolution, *Vaucheria sessilis*, 239
restriction site analysis, plastid DNA, molecular evolution, restriction polymorphism, *Vaucheria sessilis*, 239
reverse transcriptase, rRNA, sequencing, ciliates, phylogeny, 249
*Rhodomicrobium vannielii*, dimorphic cell cycles, 13
ribosomal RNA, sequences, protists, evolution, 203
ribosomal RNA genes, chlorophyta, Chlamydomonas, restriction endonucleases, phylogenetic relationships, dideoxynucleotide sequencing, 223
16S rRNA, cladistics, 5S rRNA, plastids, mitochondria, endosymbiotic theory, 209
24-26S rRNA secondary structure, protists, molecular phylogeny, 215
5S rRNA, cladistics, 16S rRNA, plastids, mitochondria, endosymbiotic theory, 209
rRNA, sequencing, ciliates, phylogeny, reverse transcriptase, 249
rRNA sequences, paralogy, progenote, sequence homogenization in multicopy gene families, archaebacteria, microsporidia, origin of organelles, 177
rumen, chytridiomycetes, metabolism, 365
rumen anaerobic fungi, anaerobic chytrids, Neocallimasticaceae, cell wall digestion, 371
rumen anaerobic fungi, zoospore ultrastructure, polyflagellate zoospore, *Neocallimastix*, 393
rumen fungi, Chytridiomycetes, zoospore structure, 403
rumen fungi, *Neocallimastix*, anaerobic fungi, survival of rumen fungi, life cycle of rumen fungi, 357
rumen fungi, systematics, Spizellomycetaceae, Neocallimasticaceae, Chytridiomycetes, 351

sequences, ribosomal RNA, protists, evolution, 203
sequence homogenization in multicopy gene families, rRNA sequences, paralogy, progenote, archaebacteria, microsporidia, origin of organelles, 177
sequencing, rRNA, ciliates, phylogeny, reverse transcriptase, 249
sexuality, chrysophyte, diatom, dinoflagellate, meiosis, *Peridinium balticum*, symbiosis, 69
sheep rumen, anaerobic fungi, cattle rumen, carbohydrate utilization, fermentation endproducts, 377
short-lived proteins, aging, carcinogenesis, instability, intrinsic, protein turnover, 135
simulation of communities, loop analysis, community level evaluation, stability, 25
Spizellomycetaceae, rumen fungi, systematics, Neocallimasticaceae, Chytridiomycetes, 351
stability, loop analysis, community level evaluation, simulation of communities, 25
stochastic network, evolutionary learning, automata, hierarchical control, graph-search, algorithm, 115
survival of rumen fungi, *Neocallimastix*, rumen fungi, anaerobic fungi, life cycle of rumen fungi, 357
switching circuit, cyclic enzyme system, computer simulations, biomolecular computer, rectifier circuit, 1
symbiosis, chrysophyte, diatom, dinoflagellate, meiosis, *Peridinium balticum*, sexuality, 69
systematics, ciliates, ultrastructure, kinetids, 317
systematics, protistan taxonomy, protistan nomenclature, evolution, 197
systematics, rumen fungi, Spizellomycetaceae, Neocallimasticaceae, Chytridiomycetes, 351

taxonomy, gut fungi, culture media, 417
terminology, ciliates, cortex, kinetids, 299
thraustochytrids, phylogenetic relationships, 341
tubulin evolution, protists, phylogeny, anti-tubulin antibody, 255

ultrastructure, ciliates, systematics, kinetids, 317

*Vaucheria sessilis*, restriction site analysis, plastid DNA, molecular evolution, restriction polymorphism, 239
virus-like particle, *Naegleria fowleri*, *Naegleria gruberi*, restriction enzyme analysis, repeated DNA, geographic spread, 269

zoospore structure, Chytridiomycetes, rumen fungi, 403
zoospore ultrastructure, rumen anaerobic fungi, polyflagellate zoospore, Neocallimastix, 393

*BioSystems*, 21 (1988) 423
